

EARTH DAY ACTIVITY

Earth Day is 50 years old this year! Although the global holiday has been celebrated for decades, pollution is *still* one of societies' biggest health issues. This Earth Day, The Asheville Museum of Science wants to challenge you to use the "Three R's":
Reduce, Reuse, and Recycle.

By REDUCING resource consumption, we can cut back on waste products and pollution.

By REUSING our resources, we can find creative uses for items we do consume.

By RECYCLING we can be intentional and mindful of how we dispose our waste.

In this challenge, we want you to use your household disposables to create something new! As an example, we have created a bird feeder from old food containers and a plastic tube. How creative can you be? How can you fill needs around your home using recyclables? Let's start reusing!

Items used:

- Poster Tube
- Spaghetti Sauce Lid
- Peanut Butter Jar Lid
- Wooden Dowel
- Old Electrical Wire

Featured Pictures of the Week!

We want to see your creations! Send us pictures of the science activities you complete for a chance to be featured in our newsletter! **Email them to edu@ashevillescience.org or tag us on social media!**
